

Blomdahl - Medical Ear Piercing

<https://blomdahlnusa.com/>

Why Blomdahl?

- Blomdahl Medical Ear Piercing is the *SAFEST!* The system is developed entirely upon what is known as “modern aseptic technique” within the health care industry. This means that all the products and methods are safely designed to avoid spreading of infections during piercing.
- Traditional ear piercing guns present a genuine health hazard. They can easily transmit blood-borne viruses.
- This system uses single-use, disposable cassettes that eliminate the chance of transmission.
- Medical Plastic and Medical Grade Titanium ear piercing studs, which are encapsulated in sterilized cassettes, are lightweight and designed for maximum air circulation, both features facilitate healing.
- Medical Plastic contains no nickel which ensures zero nickel exposure, eliminating the risk of developing nickel allergy. Medical Grade Titanium is the safest of all metals.
- By choosing medical ear piercing, our patients will enjoy the privacy and professionalism of a medical exam room and the training and skills of a licensed professional.

What is the recommended age for piercing?

- Recommended for patients 4 months to 1 year of age and patients 5+ years (*4 months and after second round of vaccines).

How much does it cost?

- Medical Grade Plastic - \$60 pair or \$35 single piercing (includes box of Swabs)
- Titanium Piercing - \$65 pair or \$40 Single piercing (includes box of Swabs)
- Additional Piercing Aftercare Cleansing Swabs (\$8/box)
 - *Aftercare cleansing swabs are saline based instead of alcohol (alcohol not needed for wounds and slows down healing).
